INTRODUCTION

Cancer remains a critical health burden in Indonesia, underscored by high incidence rates across various complex malignancies. According to Globocan data, lung cancer accounts for 34,783 new cases as a leading cause of mortality, alongside 13,563 new cases of prostate cancer and 5,964 cases of glioma and central nervous system tumors. Additionally, pediatric and adolescent populations face a growing toll, with an estimated 9,550 children (ages 0–14) and 5,140 adolescents (ages 15–19) projected for diagnosis in 2025 alone. As global annual diagnoses head toward 35 million by 2050, many local patients continue seeking overseas treatment—highlighting an urgent need for advanced clinical updates and continuous medical education to rebuild trust in domestic healthcare.

To directly address these challenges, Adi Husada Cancer Center (AHCC) will host the Surabaya Symposium of Oncology (SYMPONY), themed "Elevating Strategies in Oncology Care for Glioma, Prostate and Lung Cancers". Featuring expert speakers from our partner hospital in Malaysia, this event facilitates a vital cross-border knowledge exchange focused on modern treatment protocols, complex tumor management, and refined patient communication. This proposal outlines the framework for SYMPONY, designed to equip local medical professionals with the latest advancements to elevate cancer care standards across Indonesia.
